"Voluntary Product Accessibility Template" and "VPAT" are registered service marks of the Information Technology Industry Council (ITI)

Evaluation Methods Used :

A sample set of 7 pages were identified to perform the audit. The pages were evaluated using:

- Windows 11 / Google Chrome / JAWS 2025
- Windows 11 / Mozilla Firefox / NVDA 2025
- MacOS 26 / Safari / VoiceOver
- iOS 26 / Safari / VoiceOver
- Android 16 / Google Chrome / TalkBack
- Windows 11 / Google Chrome / ZoomText 2025
- Windows 11 / Google Chrome / Dragon Naturally Speaking 16

Accessibility testers performed the audit using:

- Automated tools
  - A11yInspect
  - Color contrast checker
- Keyboard-only interaction
- Screen readers
- Screen magnifier
- Speech recognition

Accessibility testers performed the test keeping WCAG 2.2 guidelines in mind. A random page was tested using ZoomText and Dragon Naturally Speaking each.

The results reflect the accessibility for a sample set of 7 pages. The following pages were evaluated:

- Homepage
- About Millennial Taste Buds
- Why Millennial Taste Buds?
- Blog Page – Vegetarian Coconut noodle soup with Bean Sprouts
- Category – Asian
- Tag – Adaptive
- Author

Chapter 3: Functional Performance Criteria (FPC)

Notes: Applicable for a sample set of 7 pages.

Criteria	Conformance Level	Remarks and Explanations
302.1 Without Vision	Partially Supports	The website features allow people without vision to use screen readers to interact with user interface elements. Few challenges may occur while accessing the website as disclosed in Table 1: 1.1.1, 1.3.1, 2.1.1, 2.4.4, 3.3.1, 3.3.2, 4.1.2 and Table 2: 3.3.3.
302.2 With Limited Vision	Partially Supports	The website features allow people with limited vision to interact with the website. Few challenges may occur while accessing the website as disclosed in Table 1: 1.4.1, 3.3.1, 3.3.2 and Table 2: 1.4.3, 2.4.7, 3.3.3.
302.3 Without Perception of Color	Partially Supports	The website features allow people without perception of color to interact with the website. Few challenges may occur while accessing the website as disclosed in Table 1: 1.4.1, 3.3.1, 3.3.2 and Table 2: 1.4.3, 2.4.7, 3.3.3.

302.4 Without Hearing	Supports	All essential functionality is available without requiring hearing, and information is conveyed visually or through text.
302.5 With Limited Hearing	Supports	All essential functionality is available without requiring hearing, and information is conveyed visually or through text.
302.6 Without Speech	Supports	The website features allow people without speech to access all the content and functionality as controls do not require speech input.
302.7 With Limited Manipulation	Partially Supports	While the majority of features are accessible with limited manipulation, some interface elements require precise or complex inputs that may pose challenges. Few challenges may occur while accessing the website as disclosed in Table 1: 2.1.1, 2.4.3, 3.3.1, 3.3.2 and Table 2: 2.4.7.
302.8 With Limited Reach and Strength	Partially Supports	Majority of interactive elements are operable with limited reach and strength; some interface components may require fine motor control or increased effort. Few challenges may occur while accessing the website as disclosed in Table 1: 2.1.1, 2.4.3 and Table 2: 2.4.7.
302.9 With Limited Language, Cognitive, and Learning Abilities	Partially Supports	The website provides generally clear structure and instructions; however, some

Clause 4: Functional Performance Statements (FPS)

Notes: Applicable for a sample set of 7 pages.

Criteria	Conformance Level	Remarks and Explanations
4.2.1 Usage without vision	Partially Supports	The website features allow people without vision to use screen readers to interact with user interface elements. Few challenges may occur while accessing the website as disclosed in Table 1: 1.1.1, 1.3.1, 2.1.1, 2.4.4, 3.3.1, 3.3.2, 4.1.2 and Table 2: 3.3.3.

4.2.5 Usage with limited hearing	Supports	All essential functionality is available without requiring hearing, and information is conveyed visually or through text.
4.2.6 Usage with no or limited vocal capability	Supports	The website features allow people without speech to access all the content and functionality as controls do not require speech input.
4.2.7 Usage with limited manipulation or strength	Partially Supports	While the majority of features are accessible with limited manipulation, some interface elements require precise or complex inputs that may pose challenges. Few challenges may occur while accessing the website as disclosed in Table 1: 2.1.1, 2.4.3, 3.3.1, 3.3.2 and Table 2: 2.4.7.
4.2.8 Usage with limited reach	Partially Supports	Majority of interactive elements are operable with limited reach and strength; some interface components may require fine motor control or increased effort. Few challenges may occur while accessing the website as disclosed in Table 1: 2.1.1, 2.4.3 and Table 2: 2.4.7.
4.2.9 Minimize photosensitive seizure triggers	Supports	The website does not include content that flashes more than three times per second or exceeds flash thresholds.
4.2.10 Usage with limited cognition, language or learning	Partially Supports	The website provides generally clear structure and instructions; however, some content and interactions may require higher cognitive effort or are not consistently easy to understand.

Clause 5: Generic Requirements

Notes: Applicable for a sample set of 7 pages.

Criteria	Conformance Level	Remarks and Explanations
5.1 Closed functionality	Heading cell – no response required	Heading cell – no response required
5.1.2 General	Heading cell – no response required	Heading cell – no response required
5.1.2.1 Closed functionality	See 5.2 through 13	See information in 5.2 through 13
5.1.2.2 Assistive technology	See 5.1.3 through 5.1.6	See information in 5.1.3 through 5.1.6
5.1.3 Non-visual access	Heading cell – no response required	Heading cell – no response required
5.1.3.1 Audio output of visual information	Not Applicable	The website itself does not generate audio output of visual information. Instead, compatibility with assistive technologies such as screen readers ensures that visual content is conveyed as audio when needed. Since the website does not directly provide its own speech output functionality, this requirement is not applicable.
5.1.3.2 Auditory output delivery including speech	Not Applicable	The website does not provide its own audio output functionality. Non-text objects (such as images and icons) include text alternatives that are programmatically available to assistive technologies, such as screen readers, which handle audio rendering. Since the website itself does not generate audio output, this requirement is not applicable.
5.1.3.3 Auditory output correlation	Not Applicable	The website ensures that when information is conveyed visually, it is also programmatically exposed so assistive technologies can

BarrierBreak

		generate corresponding auditory output. The auditory rendering provided by screen readers accurately reflects the visual presentation and sequence of the website, ensuring consistency between what is displayed and what is spoken.
5.1.3.4 Speech output user control	Not Applicable	The website does not produce speech output directly but is fully compatible with assistive technologies (such as screen readers) that provide speech output. Users maintain complete control over speech output, including the ability to start, stop, pause, or adjust it, through their chosen assistive technology and browser settings. The website does not override or restrict these controls.
5.1.3.5 Speech output automatic interruption	Not Applicable	The website does not generate its own speech output. Instead, it relies on assistive technologies such as screen readers, which allow users to control when and how speech output occurs. The website does not automatically interrupt or override speech output, ensuring that users remain in full control of auditory feedback.
5.1.3.6 Speech output for non-text content	Supports	All meaningful non-text content on the website (such as images, icons, and graphical elements) includes text alternatives that are programmatically determinable. This ensures that assistive technologies, such as screen readers, can generate appropriate

BarrierBreak

		speech output so that users without vision receive the same information as sighted users. Decorative and redundant images are marked to be ignored by assistive technologies, preventing unnecessary speech output.
5.1.3.7 Speech output for video information	Not Applicable	The website does not provide prerecorded video information. Therefore this requirement is not applicable
5.1.3.8 Masked entry	Not Applicable	The website does not include masked entry fields, such as password or PIN inputs. Since no such functionality exists, this requirement is not applicable.
5.1.3.9 Private access to personal data	Not Applicable	The website does not require users to provide, store, or access personal data that would necessitate private access controls. Since no personal or sensitive information is collected or managed, this requirement is not applicable.
5.1.3.10 Non-interfering audio output	Not Applicable	The website does not generate its own audio output that could interfere with assistive technology speech output.
5.1.3.11 Private listening volume	Not Applicable	The website does not generate its own system-level audio output or provide hardware for private listening (such as volume controls, headsets, or external speakers). Users rely on their own device and browser settings to manage audio playback volume. Since the website does not provide separate audio hardware or private listening controls, this requirement is not applicable.

BarrierBreak

5.1.3.12 Speaker volume	Not Applicable	The website does not provide hardware or built-in speakers and does not control device-level audio output. Users manage playback volume through their own device or browser settings. Since the website itself does not include speaker hardware or independent volume controls, this requirement is not applicable.
5.1.3.13 Volume reset	Not Applicable	The website does not provide hardware or system-level audio output with independent volume settings. Users manage playback volume through their device or browser controls. Since the website does not include a separate audio system that could require an automatic reset of volume, this requirement is not applicable.
5.1.3.14 Spoken languages	Not Applicable	The website does not contain prerecorded video and audio content.
5.1.3.15 Non-visual error identification	Does Not Support	The website does not provide programmatically determinable error identification for all form fields and interactive inputs. Error messages are not exposed to assistive technologies such as screen readers, resulting in users without vision unable to understand what corrections are needed.
5.1.3.16 Receipts, tickets, and transactional outputs	Not Applicable	The website does not generate receipts, tickets, confirmations, or other transactional outputs. Since no such functionality exists, this requirement is not applicable.

BarrierBreak

5.1.4 Functionality closed to text enlargement	Supports	The website does not restrict or block the use of platform features for text enlargement. Users can resize text up to 200% without loss of content or functionality by using browser zoom or operating system accessibility settings. The site's responsive design ensures that enlarged text remains readable and usable without requiring horizontal scrolling.
5.1.5 Visual output for auditory information	Supports	The website does not rely solely on auditory information to convey meaning.
5.1.6 Operation without keyboard interface	Heading cell – no response required	Heading cell – no response required
5.1.6.1 Closed functionality	See 5.1.3.1 through 5.1.3.16	See information in 5.1.3.1 through 5.1.3.16
5.1.6.2 Input focus	Partially Supports	The website ensures that when input focus is moved to most of the components (such as a link, button, or form field), the focus is visually and programmatically exposed. Users navigating with a keyboard or assistive technologies can clearly identify which element currently has focus and focus changes do not trigger unexpected context changes. Some components either lacks visual focus indicator or has focus indicator that is not clearly visible.
5.1.7 Access without speech	Supports	The website does not require speech input for any functionality. All features, including navigation, form submission, and interactive elements, are fully operable using a keyboard, mouse, touch, or

BarrierBreak

		assistive technologies. Users who cannot use speech are not disadvantaged in accessing or operating the site.
5.2 Activation of accessibility features	Supports	The website does not override or restrict activation of accessibility features provided by the browser, operating system, or assistive technologies. Users are free to enable features such as high contrast, text enlargement, zoom, screen readers, and keyboard navigation. The site is fully compatible with these platform-level accessibility functions.
5.3 Biometrics	Not Applicable	The website does not use biometric methods (such as fingerprint, facial recognition, voice recognition, or other biometric identifiers) for user authentication or interaction. Since no biometric functionality is implemented, this requirement is not applicable.
5.4 Preservation of accessibility information during conversion	Not Applicable	The website does not perform format conversions that would remove or alter accessibility information. When content is provided in alternative formats (such as PDF or downloadable documents), accessibility information such as headings, text alternatives, and structural markup is preserved to ensure compatibility with assistive technologies.
5.5 Operable parts	Heading cell – no response required	Heading cell – no response required
5.5.1 Means of operation	Partially Supports	Most functionality is operable through multiple input

BarrierBreak

		methods; however, some features rely on specific interaction types (e.g., pointer input) without equivalent alternatives.
5.5.2 Operable parts discernibility	Partially Supports	Most operable parts are identifiable; however, some interactive elements (e.g., low-contrast elements) are not clearly distinguishable from non-interactive content.
5.6 Locking or toggle controls	Heading cell – no response required	Heading cell – no response required
5.6.1 Tactile or auditory status	Not Applicable	The website does not include status changes communicated via tactile or auditory feedback.
5.6.2 Visual status	Not Applicable	The website does not include dynamic status changes or state updates that require visual status indication.
5.7 Key repeat	Not Applicable	The website does not implement or require key repeat functionality (such as holding down a key for continuous input). Input is handled through standard browser and operating system controls. Since no custom key repeat behavior is provided by the website itself, this requirement is not applicable.
5.8 Double-strike key acceptance	Not Applicable	The website does not implement or require double-strike key acceptance (such as pressing the same key twice to activate functionality). All input is managed through standard browser and operating system controls. Since no custom double-strike key behavior exists in the website, this requirement is not applicable.
5.9 Simultaneous user actions	Not Applicable	The website does not require users to perform

BarrierBreak

		simultaneous actions (such as pressing multiple keys or combining physical actions at the same time) to operate any functionality. All interactions are available through simple, sequential inputs using standard controls. Since simultaneous actions are not part of the website's design, this requirement is not applicable.
